

KRAMER DGKAT™ CABLE

THE ONLY REAL CHOICE
FOR LONG DISTANCE
DIGITAL VIDEO SIGNAL ROUTING

Ordinary category cables are optimized for data networks or for use with analog video signals and will present construction and quality barriers once used with digital signals. To overcome the distance limitations of HDMI & DVI signals and maximize signal quality, use category cables designed specifically for HDMI & DVI signals.

Kramer's DGKat Series shielded twisted pair cable is specifically designed to deliver pristine digital video signals over the longest possible distances, ensuring optimum results.

Kramer's DGKat Series includes three cable types: DGKat-524, DGKat-623 and plenum rated DGKat-724 and are available in bulk spools or pre-terminated custom lengths.

USE KRAMER DGKAT CABLES FOR GUARANTEED BEST PERFORMANCE AND RANGE!
