

K-Touch v3.0

THE HEART OF KRAMER'S CONTROL SOLUTIONS

Available on the App Store and Google Play

K-Touch v3.0 is a comprehensive Cloud-based platform that lets installers easily design advanced room-control and automation systems that can be operated from any iOS or Android touch device.

EASY TO LEARN AND USE

With our new online training course, developers can quickly learn how to use K-Touch v3.0 – in hours, not days, and with no travel costs. A comprehensive and constantly-updated knowledge base is available with additional instructions for both simple and complex tasks. A wizard-driven, drag-and-drop design interface makes K-Touch v3.0 very easy to use.

HIGHLY SCALABLE

Use in a small room with one projector and a switcher or an entire “smart office.” Control over 100 devices with the ultimate virtual button panel. Add or remove devices quickly and easily with Cloud sync.

COST EFFECTIVE

Dramatically reduce costs: Install the platform on any touch device and provide remote support and updates via the Cloud. No expensive dedicated hardware. No additional truck rolls.

K-TOUCH V3.0 FEATURES

CLOUD-BASED

Design your K-Touch v3.0 control system on your Web browser (no need for software). Share and collaborate easily in the Cloud. Install once and save significant costs with remote Cloud-based support and Maintenance.

MODULES

K-Touch v3.0 features pre-designed GUIs that allow complex control of industry-leading room automation systems. Modules include support for lighting, shades, HVAC, sound systems and Kramer's award-winning VIA Collaboration solution.

STATE-OF-THE-ART AUTOMATION

Easily design fully automated room control solutions. The K-Touch v3.0 development platform now includes support for multi-device feedback, global variables and conditional phrases.

LARGE SCALE

Projects can be connected to a large number of controllable devices, such as screens and cable boxes. Virtual button panels can include hundreds of buttons, covering any control scenario for large-scale deployments.

ALL-IN-ONE SOLUTION

K-Touch v3.0 offers complete control and automation system design. Each control panel can control devices directly over IP. When used with Kramer FC-series format converters or 3rd party controllers, devices can also be controlled via RS-232, GPIO, relays, or IR. Kramer RC-series button controllers can be used on any project for tactile feedback.

WIZARD-BASED DESIGN

K-Touch v3.0 step-by-step wizards make designing control systems even easier. We also offer a wide variety of pre-configured device drivers for Kramer systems, screens, projectors, and more.
