VP-729

THE NEWEST MEMBER OF OUR LEADING SCALER FAMILY

The VP-729 is an 9-input scaler/switcher that sets new quality and performance benchmarks in the Kramer line up of ProScale scalers and scaler/switchers with the incorporation of HQV video processing.

HQV (Hollywood Quality Video) processing represents the state-of-the-art in video processing technology, with the highest quality de-interlacing, noise reduction, and scaling performance for both standard-definition and high-definition signals. Now with HDMI inputs and outputs, this model establishes a new level of price performance for the Pro AV and residential markets.
