2.1 Quick Start

This quick start chart summarizes the basic setup and operation steps.

3 Overview

The **FC-113 HDMI to SD/HD-SDI Converter** is a high-performance format converter for SDI (SMPTE 259M), HD-SDI (SMPTE 292M), and 3G HD-SDI (SMPTE 424M) signals. It converts an HDMI input to two identical SDI video with embedded audio output signals. The **FC-113** does not perform frame rate or resolution conversion¹.

¹ It has to receive an HD or SD signal to convert it to SD/HD-SDI signals
The **FC-113** features:
- One HDMI input
- Two SD/HD-SDI/3G HD-SDI outputs on BNC connectors
- HDTV compatibility
- Active LED indicators on the front panel. Green indicates a standard (SDI) definition and blue indicates a (HD-SDI) high-definition input signal
- 5V DC power
- Medical equipment compliance

### 3.1 Recommendations for Best Performance

To achieve the best performance:
- Use only good quality connection cables\(^1\) to avoid interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables)
- Do not secure the cables in tight bundles or roll the slack into tight coils
- Avoid interference from neighboring electrical appliances that may adversely influence signal quality and position your Kramer **FC-113** away from moisture, excessive sunlight and dust

**Warning:** Disconnect power and unplug unit from wall before installing or removing the device or servicing unit

### 3.2 Accessory to Medical Equipment (IEC 60601-1)

In the modern medical environment remote access is essential, for example, to transfer clinical data between doctors and to train to medical students. The **FC-113** is certified according to the IEC 60601-1-2, Clause 2.1.3, Medical Electrical Equipment, Part 1: General Requirements for EMC standard which is required when accessory devices are used at locations where medical personnel and patients are present.

The **FC-113** constitutes an optional component that can be considered necessary and suitable as part of medical equipment or for use as part of a medical system to provide real time simultaneous video feeds to those present at the local medical environment and at remote locations. In this

environment, the **FC-113** can be added to the system ONLY if the connecting equipment has been evaluated and meets the IEC 60601-1-2 EMC standards. Note, that when attaching accessory devices to a digital or analog interface, they must comply with the IEC standard for which they are used: EMC Standard (IEC 60601-1-2), Information Technology equipment (IEC 60950-1 (2ed)).
