The Kramer RC-20TB 2-Button Contact Closure Switch

Congratulations on purchasing your Kramer RC-20TB single slot wall plate insert 2-Button Contact Closure Switch which is ideal for using as a means of remote control in boardrooms and conference rooms. It can be used with the VP-81SID step-in switcher or any other Kramer product with contact closure control.

The RC-20TB front panel has two momentary switching buttons (labeled A and B). On the rear are remote momentary contact closure terminal block connectors that connect to a remote switch terminal block connector.

Figure 1 shows the RC-20TB front panel and the pinout on the rear:

![Figure 1: RC-20TB Front Panel and Rear](image)

The RC-20TB can remotely switch the inputs of a machine via its remote contact closure terminal blocks. For example, you can connect the RC-20TB to the REMOTE contact closure terminal block connectors of the Kramer VS-162AVM 16x16 Audio-Video Router with Preview Monitor (download the up-to-date Kramer user manual at: [www.kramerelectronics.com](http://www.kramerelectronics.com)), to remotely switch one of two inputs to the output by momentarily pressing button A or button B, respectively.

In the example illustrated in Figure 2 two SID-H HDMI Step In Commander units are connected to RC-20TB.

![Figure 2: RC-20TB connected to two SID-H Units](image)

To connect the RC-20TB, as illustrated in the example in Figure 2 and Figure 3, connect the remote terminal block connectors on each SID-H machine to the A and B terminal block connectors of the RC-20TB.

Momentarily pressing button A or B on the RC-20TB activates the STEP-IN process (allowing this machine's input to be selected on the VP-81SID) in Machine A or Machine B, respectively.
SAFETY WARNING
Disconnect the unit from the power supply before opening and servicing.
