

# ANDROID NFC QUICK START GUIDE

**This document helps customers configure an NFC tag for logging on to a VIA Connect PRO, Campus or Collage unit without entering any of the login information.**

## PREREQUISITES

1. VIA Connect PRO / Campus / Collage unit
2. Android device with NFC capability built-in
3. Writable NFC tag (available from Kramer)
4. VIA NFC tag writer application (Please download our .apk application from Kramer Web site)

## WHAT IS NFC?

Near field communication (NFC) is a set of protocols that enable electronic devices to establish radio communication with each other by touching the devices together, or bringing them into proximity to a distance of typically 10cm or less.

# PROCEDURE

## WRITING AN NFC TAG

1. Install VIA NFC Writer on an Android device.
2. Open VIA NFC Writer
3. A page similar to a VIA login page opens
4. Enter the Room Name and click Write Tag.
5. Touch the Android device (or gently tap) on the writable tag, when prompted.
6. Another prompt confirms that the tag has been successfully written.

## HOW TO USE

1. Enable NFC on an Android device.
2. Touch the Android device (or gently tap) on the tag.  
An Android device may or may not have VIA already installed.

### VIA NOT INSTALLED

When an Android device does not have VIA installed, the Google Play Store page is launched which has a VIA application download option. Install the VIA Android application.

### VIA INSTALLED

Tap on the tag. The VIA application launches and automatically logs in to a VIA Connect PRO, Campus or Collage. Room code is bypassed.

### VIA IN BACKGROUND

Same as above.

### VIA INSTALLED AND CONNECTED

In this situation, a prompt asks the user to logout before touching the tag with an Android device.
