1 Introduction

Welcome to Kramer Electronics! Since 1981, Kramer Electronics has been providing a world of unique, creative, and affordable solutions to the vast range of problems that confront video, audio, presentation, and broadcasting professionals on a daily basis. In recent years, we have redesigned and upgraded most of our line, making the best even better!

Our 1,000-plus different models now appear in 14 groups that are clearly defined by function: GROUP 1: Distribution Amplifiers; GROUP 2: Switchers and Routers; GROUP 3: Control Systems; GROUP 4: Format/Standards Converters; GROUP 5: Range Extenders and Repeaters; GROUP 6: Specialty AV Products; GROUP 7: Scan Converters and Scalers; GROUP 8: Cables and Connectors; GROUP 9: Room Connectivity; GROUP 10: Accessories and Rack Adapters; GROUP 11: Sierra Video Products; GROUP 12: Digital Signage; GROUP 13: Audio; and GROUP 14: Collaboration.

Congratulations on purchasing your VP-8x8AK 8x8 VGA / UXGA / Audio Matrix Switcher, which is ideal for the following typical applications:

- Professional display systems requiring a true 8x8 computer graphics and audio matrix operation
- Multimedia and presentation source, and acceptor selection

The package includes the following items:

- VP-8x8AK 8x8 VGA / UXGA Matrix Switcher
- Windows®-based Kramer control software¹
- Kramer RC-IR3 Infrared Remote Control Transmitter (including the required battery and a separate user manual³)
- Power cord², rack “ears” and this user manual³

2 Getting Started

We recommend that you:

- Unpack the equipment carefully and save the original box and packaging materials for possible future shipment
- Review the contents of this user manual

---

¹ Downloadable from our Web site at [http://www.kramerelectronics.com](http://www.kramerelectronics.com)

² We recommend that you use only the power cord that is supplied with this machine

³ Download up-to-date Kramer user manuals from our Web site at [http://www.kramerelectronics.com](http://www.kramerelectronics.com)
Go to www.kramerav.com/downloads/VP-8x8AK to check for up-to-date user manuals, application programs, and to check if firmware upgrades are available (where appropriate).

2.1 Achieving the Best Performance

To achieve the best performance:

- Use only good quality connection cables (we recommend Kramer high-performance, high-resolution cables) to avoid interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables)
- Do not secure the cables in tight bundles or roll the slack into tight coils
- Avoid interference from neighbouring electrical appliances that may adversely influence signal quality
- Position your VP-8x8AK away from moisture, excessive sunlight and dust

This equipment is to be used only inside a building. It may only be connected to other equipment that is installed inside a building.

2.2 Safety Instructions

Caution: There are no operator serviceable parts inside the unit

Warning: Use only the power cord that is supplied with the unit

Warning: Do not open the unit. High voltages can cause electrical shock! Servicing by qualified personnel only

Warning: Disconnect the power and unplug the unit from the wall before installing

Warning: In case of static electricity discharge, the device may freeze and require restarting. The product then returns to normal operation in its pre-freeze state
2.3 Recycling Kramer Products

The Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC aims to reduce the amount of WEEE sent for disposal to landfill or incineration by requiring it to be collected and recycled. To comply with the WEEE Directive, Kramer Electronics has made arrangements with the European Advanced Recycling Network (EARN) and will cover any costs of treatment, recycling and recovery of waste Kramer Electronics branded equipment on arrival at the EARN facility. For details of Kramer’s recycling arrangements in your particular country go to our recycling pages at http://www.kramerelectronics.com/support/recycling/.

2.4 Quick Start

This quick start chart summarizes the basic setup and operation steps.
Step 1: Mount the machine - see section 5
Mount the machine in a rack or stick the 4 rubber feet to the underside

Step 2: Connect the inputs and outputs - see section 6
1. Connect the inputs
2. Connect the outputs

Step 3: Turn the power ON

Step 4: Operate the machine - see section 7
Use the SELECTOR buttons to switch the inputs to the outputs:
- Press VIDEO and AUDIO to set the DELAY time
- Press STO and RCL to set the MACH #
- Increase or decrease the AUDIO LEVEL
- LOCK the front panel

Unlock 

Connect a selected input to ALL the outputs; disconnect an output (OFF) from an input
APV - Audio follows video when switching
VIDEO - Switching relates to the video signal
AUDIO - Switching relates to the audio signal
Store (STO) and recall (RCL) the status

Operate via the front panel buttons, RS-232, RS-485 and the Ethernet

Read the STATUS and the REL AUDIO LEVEL on the 7-segment displays
3 Overview

The **VP-8x8AK** is a high performance 8x8 computer graphics video matrix switcher for high-resolution video and stereo audio signals. The **VP-8x8AK** is HDTV compatible and lets you route any combination of inputs and outputs.

In particular, the **VP-8x8AK 8x8 VGA / UXGA / Audio Matrix Switcher** features:

- Kramer’s innovative integrated sync processing; Kr-isp® technology that lets you achieve a sharp, stable image when the sync level is too low, by restoring the sync signal waveform
- A video bandwidth of over 360MHz that ensures transparent performance even in the most critical applications
- 16 preset memory locations for quick access to common video and audio configurations and audio gain status for each output
- Automatic detection of the connected input signals (the respective button illuminates)
- A delayed switching mode (ranging from 0 to 3.5sec\(^1\)) for clean transitions when switching between non-genlocked sources
- DC-coupled video inputs and outputs
- Audio-follow-video and breakaway options
- Eight stereo unbalanced stereo audio input signals on 3.5mm mini plugs
- Eight balanced stereo audio output signals on 5-pin terminal block connectors
- Audio level control buttons for adjusting the signal level of each input and each output
- Measurement and indication of the audio level for each input and output, in relative dB
- A TAKE button, which allows you to place multiple switches in a queue and then activate them simultaneously with one touch of this button
- A LOCK button to prevent tampering with the front panel
- Supports DDC (Display Data Channel) communication between selected input 1 and output 1 high-density 15-pin HD connectors on pins 12 and 15
- Control via embedded Web pages

---

\(^1\) In increments of 0.5sec
Control the **VP-8x8AK** using the front panel buttons, or remotely via:

- RS-485 or RS-232 serial commands (using Kramer 2000 and 3000 protocols) transmitted by a touch screen system, PC, or other serial controller
- The Kramer infrared remote control transmitter or infrared remote extension cable transmitter (optional)
- Ethernet over a LAN

The **VP-8x8AK** is dependable, rugged, and fits into two vertical spaces (2U) of a standard 19” professional rack.

4 Your VP-8x8AK 8x8 VGA / UXGA / Audio Matrix Switcher

*Figure 1, Figure 2, Table 1, and Table 2 define the VP-8x8AK 8x8 VGA / UXGA / Audio Matrix Switcher.*

4.1 Using the IR Transmitter

You can use the RC-IR3 IR transmitter to control the machine via the built-in IR receiver on the front panel or, instead, via an optional external IR receiver6. The external IR receiver can be located up to 15 meters away from the machine. This distance can be extended to up to 60 meters when used with three extension cables6.

Before using the external IR receiver, be sure to arrange for your Kramer dealer to insert the internal IR connection cable7 with the 3.5mm connector that fits into the REMOTE IR opening on the rear panel. Connect the external IR receiver to the REMOTE IR 3.5mm connector.

---

1 The first and the last units on the RS-485 line should be terminated (ON). Other units should be unterminated (OFF)
2 Covered by a cap. The 3.5mm connector at the end of the internal IR connection cable fits through this opening
3 Optional. Can be used instead of the front panel (built-in) IR receiver to remotely control the machine (only if the internal IR connection cable has been installed)
4 Turn the machine OFF using the power switch and then turn it ON while pressing the ETH Factory Reset button. The unit will power up and load its memory with the factory default definitions
5 Model: C-A35M/IRR-50
6 Model: C-A35M/A35F-50
7 P/N: 505-70434010-S
5 Installing the VP-8x8AK in a Rack

This section describes what to do before installing in a rack and how to rack mount.

<table>
<thead>
<tr>
<th>Before installing in a rack, be sure that the environment is within the recommended range:</th>
</tr>
</thead>
<tbody>
<tr>
<td>OPERATING TEMPERATURE: 0° to +40°C (32° to 104°F)</td>
</tr>
<tr>
<td>STORAGE TEMPERATURE: -40° to +70°C (-40° to 158°F)</td>
</tr>
<tr>
<td>HUMIDITY: 10% to 90%, RHL non-condensing</td>
</tr>
</tbody>
</table>

**CAUTION!**

When installing on a 19” rack, avoid hazards by taking care that:

1. It is located within the recommended environmental conditions, as the operating ambient temperature of a closed or multi unit rack assembly may exceed the room ambient temperature.
2. Once rack mounted, enough air will still flow around the machine.
3. The machine is placed straight in the correct horizontal position.
4. You do not overload the circuit(s). When connecting the machine to the supply circuit, overloading the circuits might have a detrimental effect on overcurrent protection and supply wiring. Refer to the appropriate nameplate ratings for information. For example, for fuse replacement, see the value printed on the product label.
5. The machine is earthed (grounded) in a reliable way and is connected only to an electricity socket with grounding. Pay particular attention to situations where electricity is supplied indirectly (when the power cord is not plugged directly into the socket in the wall), for example, when using an extension cable or a power strip, and that you use only the power cord that is supplied with the machine.

**To rack-mount a machine:**

1. Attach both ear brackets to the machine. To do so, remove the screws from each side of the machine (5 on each side), and replace those screws through the ear brackets.

2. Place the ears of the machine against the rack rails, and insert the proper screws (not provided) through each of the four holes in the rack ears.

**Note:**

- In some models, the front panel may feature built-in rack ears
- Detachable rack ears can be removed for desktop use
- Always mount the machine in the rack before you attach any cables or connect the machine to the power
- If you are using a Kramer rack adapter kit (for a machine that is not 19”), see the Rack Adapters user manual for installation instructions available from our Web site
6 Using the VP-8x8AK

This section describes how to:

- Connect the VP-8x8AK rear panel (see Section 6.1)
- Connect a balanced stereo audio output (see Section 6.2)
- Connect the VP-8x8AK to a controlling device via RS-232 (see Section 6.3), RS-485 (see Section 6.4) and/or the ETHERNET (see Section 6.5)
- Set the switching delay time (see Section 6.7)
- Set the machine number (see Section 6.8)
- Connect several VP-8x8AK machines (see Section 6.9)

6.1 Connecting the VP-8x8AK Rear Panel

To connect the VP-8x8AK, as illustrated in the example in Figure 3, do the following:

1. Connect up to eight VGA/UXGA computer graphics sources to the INPUT 15-pin HD connectors.
2. Connect up to eight unbalanced stereo audio sources (for example, the audio source of the computer, or a stereo audio source) to the eight INPUT 3.5mm mini connectors.
3. Connect the eight OUTPUT 15-pin HD connectors to up to eight VGA/UXGA video acceptors (for example, displays).
4. Connect the eight OUTPUT terminal block connectors to up to eight balanced stereo audio acceptors (for example, balanced stereo audio amplifiers with speakers).
5. If required, you can connect a PC and/or controller to the:
   - RS-232 port (See Section 6.3)
   - RS-485 port (see Section 6.4)
   - ETHERNET (see Section 6.5)
6. Connect the power cord (not shown in Figure 3).

---

1 You do not need to connect all inputs and outputs
2 Switch OFF the power on each device before connecting it to your VP-8x8AK. After connecting your VP-8x8AK, switch on its power and then switch on the power on each device. DO NOT push in the rear panel Flash Program “PROG” button, it is only used for upgrading to the latest Kramer firmware
3 We recommend that you use only the power cord that is supplied with this machine
Figure 3: Connecting the VP-8x8AK 8x8 VGA / UXGA / Audio Matrix Switcher
6.2 Connecting the Balanced/Unbalanced Stereo Audio Output

This section illustrates how to wire:

- A balanced output connection, see Figure 4
- An unbalanced audio output, see Figure 5

![Figure 4: Connecting the Balanced Stereo Audio Output](image1)

![Figure 5: Connecting an Unbalanced Output](image2)

6.3 Connecting a PC or Controller to the RS-232 Port

You can connect to the VP-8x8AK via an RS-232 connection using, for example, a PC. Note that a null-modem adapter/connection is not required.

To connect to the VP-8x8AK via RS-232:

- Connect the RS-232 9-pin D-sub rear panel port on the product unit via a 9-wire straight cable (only pin 2 to pin 2, pin 3 to pin 3, and pin 5 to pin 5 need to be connected) to the RS-232 9-pin D-sub port on your PC

6.4 Connecting a PC or Controller to the RS 485 Port

You can operate the VP-8x8AK via the RS-485 port from a distance of up to 1200m (3900ft) using any device equipped with an RS-485 port (for example, a PC). For successful communication, you must set the RS-485 machine number and bus termination.

To connect a device with a RS-485 port to the VP-8x8AK:
Using the VP-8x8AK

- Connect the A (+) pin on the RS-485 port of the PC to the A (+) pin on the RS-485 port on the rear panel of the VP-8x8AK
- Connect the B (−) pin on the RS-485 port of the PC to the B (−) pin on the RS-485 port on the rear panel of the VP-8x8AK
- Connect the G pin on the RS-485 port of the PC to the G pin on the RS-485 port on the rear panel of the VP-8x8AK

6.5 Configuring the Ethernet Port

To configure the Ethernet port, you have to connect your PC to the VP-8x8AK either via the Ethernet (see Section 6.5.1) or via a serial port. Once the machine is connected, you can configure the Ethernet port.

6.5.1 Connecting via the Ethernet

You can connect the VP-8x8AK via the ETHERNET in the following ways:
- For direct connection to the PC, use a crossover cable (see Section 6.5.1.1)
- For connection via a network hub or network router, use a straight-through cable (see Section 6.5.1.2)

6.5.1.1 Connecting the ETHERNET Port Directly to a PC (Crossover Cable)

You can connect the Ethernet port of the machine to the Ethernet port on your PC, via a crossover cable with RJ-45 connectors.

This type of connection is recommended for identification of the factory default IP Address of the VP-8x8AK during the initial configuration.

After connecting the Ethernet port, configure your PC as follows:
1. Right-click the My Network Places icon on your desktop.
2. Select Properties.
3. Right-click Local Area Connection Properties.
4. Select Properties.
   The Local Area Connection Properties window appears.
5. Select the Internet Protocol (TCP/IP) and click the Properties Button (see Figure 6).

1 The default IP address is 192.168.1.39
Using the VP-8x8AK

6. Select Use the following IP Address, and fill in the details as shown in Figure 7. You can use any IP address in the range 192.168.1.1 to 192.168.1.255 (excluding 192.168.1.39) that is provided by your IT department.

7. Click OK.

6.5.1.2 Connecting the ETHERNET Port via a Network Hub (Straight-Through Cable)

You can connect the Ethernet port of the VP-8x8AK to the Ethernet port on a network hub or network router, via a straight-through cable with RJ-45 connectors.
6.5.2 Ethernet Port Configuration

To configure the Ethernet port, download the *Device Properties* Ethernet configuration software. Extract the file to a folder and create a shortcut on your desktop to the file.

Follow these steps to configure the port:

1. Double click the desktop icon.
   The Connect screen appears as follows:

   ![Connect Screen](image)

   **Figure 8: Connect Screen**

2. Select the method to connect to the Ethernet port of the **VP-8x8AK**.
   Select:
   - Ethernet, if you know the IP address number\(^1\) or the machine name.
     The default name for the machine is KRAMER_XXXX\(^2\)
   - Serial, if you are connected via a serial port

3. Click OK.
   The Device Properties window appears:

---

1 The default IP address is 192.168.1.39
2 The four digits are the last four digits of the machine’s serial number.
4. If required, make changes and press Set. If not, click Close.

6.6 Control via the Ethernet Port

You can control the VP-8x8AK via RS-232/RS-485 or the Ethernet using the Kramer K-Router application.

If you are controlling a standalone unit via RS-232 or the Ethernet, configure the unit as master (Mach No. 1), see Section 6.8.

6.7 Setting the Switching Delay Time
You can achieve clean transitions when switching between non-genlocked sources by setting the delay time—ranging from 0sec to 3.5sec. The factory default delay is to 0sec.

To set the delay time, do the following:

1. Press the VIDEO and AUDIO front panel buttons simultaneously. The 7-segment display shows the current switching delay time.
2. Use the + and – front panel buttons to set the delay time as required.

To exit the Delay mode, press the TAKE front panel button.

### 6.8 Setting the Machine Number

The MACH. # (machine number) determines the position of a VP-8x8AK unit when cascading units.

To set the MACH. #, do the following:

1. Press the STO and RCL front panel buttons simultaneously. The 7-segment display shows the current machine number.
2. Use the + and – front panel buttons to set the machine number as required.

To exit the MACH. # mode, press the TAKE front panel button.

### 6.9 Cascading Machines

You can cascade up to 16 VP-8x8AK units with control from a PC or serial controller.

To cascade up to 16 individual VP-8x8AK units via RS-485 (as illustrated in Figure 10), do the following:

1. Connect the sources and acceptors, as Section 6.1 describes.
2. Connect the RS-232 port of the first VP-8x8AK unit to a PC.
3. Connect the RS-485 terminal block port on the first unit to the RS-485 port on the second VP-8x8AK unit and so on, connecting all the RS-485 ports.
4. Set the machine numbers of the connected machines, as described in Section 6.8, by set the first VP-8x8AK unit as Machine # 1 and the following 15 VP-8x8AK units as Machine # 2 to Machine # 16.

---

1 In increments of 0.5sec
2 Alternatively, the ETHERNET port could be used for PC control (instead of RS-232)
5. Set the RS-485 TERM DIP-switch ON on the first and last **VP-8x8AK** units (terminating the RS-485 line at 120Ω). Set the RS-485 TERM DIP-switch OFF on the other **VP-8x8AK** units.

---

**Figure 10: Control Configuration via RS-232 and RS-485**
7 Operating the VP-8x8AK

This section describes how to:
- Use the IN and OUT buttons (see Section 7.1)
- Understand the 7-segment displays (see Section 7.2)
- Confirm settings (see Section 7.3)
- Store and recall input/output configurations (see Section 7.4)
- Lock the front panel (see Section 7.5)
- Choose the audio-follow-video or the breakaway feature (see Section 7.6)
- Use the audio gain control (see Section 7.7)

7.1 Switching an Input to an Output

To switch an input to an output:
1. Press the required OUT button.
   The input under the selected output on the IN 7-segment display blinks.
2. Press an IN button to select the input to switch to the output.
   The selected input number appears on the 7-segment display.

Note: If the crosspoint status is disrupted, cycle the power to recover or perform the above steps for each affected output.

Incomplete operations on the VP-8x8AK timeout after 15 seconds

7.2 Understanding the 7-Segment Displays

The VP-8x8AK has two displays:
- The STATUS 7-segment display
- The REL. AUDIO LEVEL (dB) 7-segment display

7.2.1 The STATUS 7-Segment Display

During normal operation, the STATUS display shows which inputs are switched to which outputs, as illustrated in Figure 11. In the VIDEO mode, the display shows the video signal setup and in the AUDIO mode, it shows the audio signal setup. In the AFV it shows both signals (see Section 7.6).

![Figure 11: 7-segment Display During Normal Operation](image)
Figure 12 shows an example of the display immediately after switching on the power. This display disappears after a few seconds, replaced by the normal display.

![Figure 12: 7-segment Display after Turning the Switcher ON](image)

7.2.2 The REL AUDIO LEVEL 7-Segment Display

The REL AUDIO LEVEL display, as illustrated in Figure 13, is active only in the AUDIO and AFV modes (see Section 7.7).

![Figure 13: REL AUDIO LEVEL 7-segment Display](image)

7.3 Confirming Settings

You can choose to work in the At Once or the Confirm mode.

In the At Once mode (TAKE button does not illuminate):

- Pressing an OUT-IN combination implements the switch immediately
- You save time as execution is immediate and actions require no user confirmation
- No protection is offered to allow the correction of an erroneous action before it is implemented

In the Confirm mode (TAKE button illuminates):

- You can key-in several actions and then confirm them by pressing the TAKE button, to simultaneously activate the multiple switches
- Every action requires user confirmation, protecting against erroneous switching
- Execution is delayed\(^1\) until the user confirms the action

---

\(^1\) Failure to press the TAKE button within 40 seconds (the Timeout) will abort the action
7.3.1 Toggling between the At Once and Confirm Modes

To toggle between the At Once and Confirm modes, do the following:

1. Press the TAKE button to toggle from the At Once mode (in which the TAKE button does not illuminate) to the Confirm mode (in which the TAKE button illuminates).
   Actions now require user confirmation and the TAKE button illuminates.
2. Press the illuminated TAKE button to toggle from the Confirm mode back to the At Once mode.
   Actions no longer require user confirmation and the TAKE button no longer illuminates.

7.3.2 Confirming a Switching Action

To confirm a switching action (in the Confirm mode), do the following:

1. Press an OUT-IN combination.
   The corresponding 7-segment display blinks with the new value. The TAKE button also blinks.
2. Press the blinking TAKE button to confirm the action.
   The corresponding 7-segment display no longer blinks. The TAKE button illuminates.

To confirm several actions (in the Confirm mode), do the following:

1. Press each OUT-IN combination in sequence.
   The corresponding 7-segment display blinks. The TAKE button also blinks.
2. Press the blinking TAKE button to confirm all the actions.
   The corresponding 7-segment display no longer blinks. The TAKE button illuminates.

7.4 Storing/Recalling Input/Output Configurations

You can store and recall up to 16 input/output configuration setups\(^1\) using the eight OUT buttons and the eight IN buttons, as Figure 14 illustrates:

![Figure 14: Storing and Recalling using the Input/Output Buttons](image)

\(^1\) You can store and recall audio and video configurations and audio gain data
7.4.1 Storing an Input/Output Configuration

To store the current status in memory, do the following:

1. Press the STO button.
   The STO button blinks.
2. Press one of the 16 IN/OUT buttons (this will be the setup # in which the current status is stored). If in the Confirm mode, press the blinking TAKE button to confirm the action.
   The memory stores the data at that reference.

7.4.2 Recalling an Input/Output Configuration

To recall an input/output configuration, do the following:

1. Press the RCL button.
   The RCL button blinks.
2. Press the appropriate IN/OUT button (the button # corresponding to the setup #). If in the Confirm mode, that setup configuration will blink in the 7-segment display, together with the RCL button and the TAKE button, and will only be implemented after pressing the TAKE button.
   The memory recalls the stored data from that reference.

Tip: If you cannot remember which of the 16-input/output configurations is the one that you want, set the VP-8x8AK to the Confirm mode and manually scan all the input/output configurations until you locate it.

7.5 Locking the Front Panel

To prevent changing the settings accidentally or tampering with the unit via the front panel buttons, lock your VP-8x8AK. Unlocking releases the protection mechanism.

To lock the VP-8x8AK:

- Press the LOCK button for more than two seconds, until the LOCK button is illuminated.
  The front panel is locked. Pressing a button will have no effect other than causing the LOCK button to blink.

To unlock the VP-8x8AK:

- Press the illuminated LOCK button, for more than two seconds, until the LOCK button is no longer illuminated and the front panel unlocks.

---

1 By pressing the RCL button followed by the INPUT/OUTPUT buttons
2 Even when the front panel is locked you can still operate via RS-232 or RS-485, as well as via the infrared remote control transmitter
3 Warning that you need to unlock to regain control via the front panel
### 7.6 Choosing the Audio-Follow-Video or Breakaway Option

You can switch stereo audio signals in one of two ways, either:

- Audio-follow-video (AFV), in which all operations relate to both the video and the audio channels; or
- Breakaway, in which video and audio channels switch independently

#### 7.6.1 Setting the Audio-Follow-Video Option

To set the Audio-follow-video (AFV) option, press the AFV button:

- If the AUDIO and VIDEO configurations are the same, then the AFV button illuminates. The audio follows the video.
- If the AUDIO differs from the VIDEO, then the TAKE and the AUDIO buttons flash. Also, the audio outputs, which are changed, flash in the INPUT STATUS 7-segment display. Press the TAKE button to confirm the modification. The audio follows the video.

#### 7.6.2 Setting the Breakaway Option

To set the Breakaway option:

Press either the AUDIO (for audio control only) or the VIDEO (for video control only) button:

- If the AUDIO button illuminates, switching operations relate to Audio, and the 7-segment display shows the audio status
- If the VIDEO button illuminates, switching operations relate to Video, and the 7-segment display shows the video status

### 7.7 The Audio Input/Output Gain Control

The audio output signal gain is activated when the machine is in the AUDIO or AFV mode.

To increase or decrease the audio gain:

1. Select the output whose audio gain you want to change. For example, press OUT 4. The OUT 4 button blinks and so does the respective input on the display.
2. Press the + or – button to increase or decrease, respectively, the audio gain of the selected output. The audio gain display lights and the audio level value shows on the display.

---

1 Warning that you are about to modify the audio configuration for AFV operation
2 In this section, the output also refers to the input
The **VP8x8AK** output audio signal level\(^1\) is shown on the REL. AUDIO LEVEL 7-segment display.

The factory default audio gain is set to 0dB. An audio gain value of 0dB indicates that the output signal value is identical to the input signal value. When increasing/decreasing the audio gain, the output signal level is higher/lower than the input signal level.

Gain level values are relative since the audio input signal can be also adjusted, while the range of the output gain remains constant\(^1\), independent of the input level adjustment. When decreasing the audio level below the minimum display value, the 7-segment display shows L, indicating low audio value.

8 Flash Memory Upgrade

The **VP8x8AK** uses a microcontroller that runs firmware located in FLASH memory.

The latest version of firmware and installation instructions can be downloaded from the Kramer Web site at [www.kramerelectronics.com](http://www.kramerelectronics.com).

---

\(^1\) The input level ranges from -100 to +20 and the output level ranges from -100 to +7.5
9 Controlling via the Embedded Web Pages

You can remotely operate the VP-8x8AK using a Web browser via the Ethernet connection (see Section 9.1). To be able to do so, you must use a supported Web browser; Microsoft (V6.0 and higher), Chrome or Firefox (V3.0 and higher).

To check that Java is installed correctly and running, browse to: http://www.java.com/en/download/help/testvm.xml

This page runs a test and displays a Java success (see Figure 15) or failure message.

![Figure 15: Java Test Page Success Message](image)

If you do not see the success message, follow the instructions on the page to:
- Load and enable Java
- Enable Javascript in your browser

9.1 Connecting to the VP-8x8AK via your Browser

Make sure that your PC is connected via a network to the VP-8x8AK and do the following:
1. Open your Internet browser.
2. Enter the unit’s IP number or name in the Address bar of your browser. If you are using DHCP, you have to enter the name.

![Figure 16: Entering the IP Number in the Address Bar](image)

1 The default IP number is 192.168.1.39, and may be changed by the system integrator
The following window appears:

![Image](image.png)

*Figure 17: Loading the Embedded Web Pages*

Check that Java and JavaScript is enabled in your browser. The following window appears:

![Image](image.png)

*Figure 18: First Time Security Warning*

3. Click Run.
   The **VP-8x8AK** switching control page is displayed (see *Figure 19*).
The Web embedded screens let you control the VP-8x8AK via the Ethernet. The menu appears on the left side of the screen. There are three remote operation Web pages:

- The switching matrix (see Section 9.2)
- Audio gain control (See Section 9.3)
- Configuration (See Section 9.4)

A help box is available for each screen when clicking the question mark that appears on the left side of the screen.

9.2 The VP-8x8AK Switching Matrix Page

The VP-8x8AK switching matrix page lets you route any or all of the eight inputs to any or all of the eight outputs, by clicking the audio and/or video signal indicators (purple and blue, respectively):

![Figure 19: VP-8x8AK Embedded Web Page](image-url)
You can perform the following operations via this Web page:

- Operate in the AFV mode or switch the audio and video separately, by clicking the Audio, Video or AFV buttons (see Section 9.2.1)
- Deselect an audio and/or video signal\(^1\) by clicking that signal indicator
- Operate in the At Once or Confirm mode (see Section 9.2.2)
- Lock or unlock the front panel, by clicking the lock icon
- Store and recall switching configurations (see Section 9.2.3)

### 9.2.1 Switch an Input to an Output via the Embedded Web Pages

To switch an input to an output (for example, input 1 to output 4):

1. Set the button to the desired operation mode (Audio, Video or AFV, as required).
2. Click the switching-point within the switching matrix (In 1 to Out 4). The audio/video signal indicators move to the In 1 to Out 4 switching matrix box, indicating that In 1 is now switched to Out 4.

![Figure 20: Switching an Input to an Output](image)

### 9.2.2 Operate in the Confirm Mode

By default, the device is set to the At-Once mode. To operate in the Confirm mode:

1. Click the red Offline button.
2. Click the desired switching-point in the switching matrix. Audio/video indicator outlines appear and the Take and Cancel buttons turn blue.

---

\(^1\) Depending on the operation mode (Audio, Video or AFV)
Controlling via the Embedded Web Pages

Figure 21: Switching an Input to an Output

3. Click either Take (to accept change) or Cancel.

You can repeat steps 2 and 3 several times.
To confirm several actions, select several switching points and then press TAKE

4. Click the Online button to exit the Confirm mode.
If you click the Online button before you click the TAKE button, the following warning appears:

Figure 22: Exiting Offline Warning

9.2.3 Store and Recall Setups

To store a matrix configuration:

1. From the Preset drop-down list, select a preset (for example, Preset 07).
   Presets that contain a configuration are displayed with a blue background; presets with no configuration have a white background.
   When selecting a preset, the Store button changes from gray to dark blue.
Figure 23: Selecting a preset

2. Click the Preview button to view the current setup stored in Preset 7.

3. Make sure the matrix is set to the desired configuration. If not, set it as required.

4. Click Store.
   The following window appears:

   ![Message from webpage dialog box](Image)

   *Figure 24: Save Preset Message*

   5. Click OK.
      The new In/Out configuration is stored in Preset 07.

To recall a preset configuration:

1. Select the desired preset number from the Preset drop-down list\(^1\) (for example, Preset 03):

---

\(^1\) When selecting a preset that contains a configuration, the Recall button changes from gray to dark blue
Controlling via the Embedded Web Pages

2. Click and hold the Preview button to view the selected Preset and then release.

3. Click Recall.
   The following window appears:
   
   ![Message from webpage]
   
   Are you sure you want load preset 0 ?
   OK  Cancel

   *Figure 25: Load Preset Message*

4. Click OK.
   The new In/Out configuration takes effect.

   You can recall a preset configuration in the Confirm mode by repeating the above procedure in the Offline state. The recalled configuration will become active when you press the Take button.

   ![VP-1622AK AUDIO GAIN CONFIGURATIONS]

   *Figure 26: Recalling a Preset in the Confirm Mode*

The Help Box

This is the main panel window. In this window you can control the channels.
9.3 Audio Gain Page

The AUDIO GAIN screen lets you set the gain for each of the input and output channels:

![Audio Gain Page Screenshot](image)

*Figure 27: Audio Gain Page*

To change an input or output gain, select the channel number, then click and hold the + or – buttons to increase or decrease the gain, respectively.

A single click will increase/decrease the audio gain by 0.5 units; double click to increase/decrease the gain by 1 unit.

The Help Box

In this page you can control the audio gain of the channels.
9.4 The Configurations Page

The CONFIGURATIONS page lets you view some Ethernet settings\(^1\) and change others (see Figure 28).

To change the configuration definitions:

1. Click CONFIGURATIONS.
   The CONFIGURATIONS Web page appears.
2. Change the definitions as required.
3. Click the Submit button to apply changes\(^2\). A window appears asking if you are sure you want to change the network settings.
4. Click Yes.
   A window appears announcing that the configuration has been successfully changed.
5. Click OK
6. If the IP number had been changed, close the browser and reload the Web page.

\[\text{Figure 28: CONFIGURATIONS Embedded Web Page}\]

* Where X is the input number from 1 - 8. For example, for channel 7 and relative level -50dB, #AUD-LVL 1,7, -50[CR]

Table 8 lists the codes that set the audio output gain. For more detailed information, see Section 14.2.
13 Hex Codes for Serial Communication (Protocol 2000)

The Hex codes listed in this section are used to set video channels for a single machine (set as Machine 1) connected via either RS-232 or Ethernet. Similar hex codes are used when the VP-8x8AK is connected via RS-485 and the machine is set to number 2.

Table 9 lists the Hex codes that switch video channels:

14 Kramer Protocol

By default, the VP-8x8AK is set to protocol 3000 (see Section 14.2) but is also compatible with Kramer’s Protocol 2000\(^1\) (see Section 14.3). Section 14.1 describes how to switch between protocol 3000 and protocol 2000.

14.1 Switching Protocols

You can switch protocols either via the front panel buttons (see Section 14.1.1) or the protocol commands (see Section 14.1.2).

14.1.1 Switching Protocols via the Front Panel Buttons

To switch from protocol 3000 to protocol 2000, press and hold\(^2\) the OUT 1 and OUT 2 buttons for a few seconds.

The display shows 2000.

To switch from protocol 2000 to protocol 3000, press and hold the OUT 1 and OUT 3 buttons for a few seconds.

The display shows 3000.

14.1.2 Switching Protocols via Protocol Commands

To switch from protocol 3000 to protocol 2000, send the following command:

\[
\#P2000<CR>
\]

To switch from protocol 2000 to protocol 3000, send the following command:

0x38, 0x80, 0x83, 0x81

The Windows®-based Kramer control software\(^3\) operates with protocol 2000. If the VP-8x8AK is set to protocol 3000, it is automatically switched to protocol 2000.

---

1 You can download our user-friendly “Software for Calculating Hex Codes for Protocol 2000” from the technical support section on our Web site at: http://www.kramerelectronics.com
2 Not as part of a switching operation
3 Download the latest software from our Web site at http://www.kramerelectronics.com
14.2  Kramer Protocol 3000

This RS-232/RS-485 communication protocol lets you control the machine from any standard terminal software (for example, Windows® HyperTerminal Application) and uses a data rate of 115200 baud, with no parity, 8 data bits, and 1 stop bit.

14.2.1  Protocol 3000 Syntax

Host message format:

<table>
<thead>
<tr>
<th>Start</th>
<th>Address (optional)</th>
<th>Body</th>
<th>Delimiter</th>
</tr>
</thead>
<tbody>
<tr>
<td>#</td>
<td>Destination_id@</td>
<td>message</td>
<td>CR</td>
</tr>
</tbody>
</table>

Simple command (commands string with only one command without addressing):

<table>
<thead>
<tr>
<th>start</th>
<th>body</th>
<th>delimiter</th>
</tr>
</thead>
<tbody>
<tr>
<td>#</td>
<td>Command SP Parameter_1,Parameter_2,…</td>
<td>CR</td>
</tr>
</tbody>
</table>

Commands string (formal syntax with commands concatenation and addressing):

```
# Address@ Command_1 Parameter1_1, Parameter1_2,… | Command_2 Parameter2_1, Parameter2_2,… | Command_3 Parameter3_1, Parameter3_2,… | … CR
```

Device message format:

<table>
<thead>
<tr>
<th>Start</th>
<th>Address (optional)</th>
<th>Body</th>
<th>Delimiter</th>
</tr>
</thead>
<tbody>
<tr>
<td>~</td>
<td>Sender_id@</td>
<td>message</td>
<td>CR LF</td>
</tr>
</tbody>
</table>

Device long response (Echoing command):

<table>
<thead>
<tr>
<th>Start</th>
<th>Address (optional)</th>
<th>Body</th>
<th>Delimiter</th>
</tr>
</thead>
<tbody>
<tr>
<td>~</td>
<td>Sender_id@</td>
<td>command SP [param1,param2,…]</td>
<td>result</td>
</tr>
</tbody>
</table>

CR = Carriage return (ASCII 13 = 0x0D)

LF = Line feed (ASCII 10 = 0x0A)

SP = Space (ASCII 32 = 0x20)
### 14.2.2 Command Parts Details

**Command:**
Sequence of ASCII letters ('A'-'Z', 'a'-'z' and '-').
Command will separate from parameters with at least single space.

**Parameters:**
Sequence of Alfa-Numeric ASCII chars ('0'-9','A'-'Z','a'-'z' and some special chars for specific commands), parameters will be separated by commas.

**Message string:**
Every command must be entered as part of message string that begin with message starting char and end with message closing char, note that string can contain more then one command separated by pipe ('|') char.

**Message starting char:**
' #' for host command query.
' ~' for machine response.

**Device address** (Optional, for Knet):
Knet Device ID follow by '@' char.

**Query sign** = '?', will follow after some commands to define query request.

**Message closing char** =

- Host messages - Carriage Return (ASCII 13), will be referred to by CR in this document.
- Machine messages - Carriage Return (ASCII 13) + Line-Feed (ASCII 10), will be referred to by CRLF.

Spaces between parameters or command parts will be ignored.

**Commands chain separator char:**
When message string contains more than one command, commands will be separated by pipe ('|').

**Commands entering:**
If terminal software used to connect over serial \ ethernet \ USB port, that possible to directly enter all commands characters (CR will be entered by Enter key, that key send also LF, but this char will be ignored by commands parser).
Sending commands from some controllers (like Crestron) require coding some characters in special form (like \X##). Anyway, there is a way to enter all ASCII characters, so it is possible to send all commands also from controller.
(Similar way can use for URL \ Telnet support that maybe will be added in future).

**Commands forms:**
Some commands have short name syntax beside the full name to allow faster typing, response is always in long syntax.

**Commands chaining:**
It is possible to enter multiple commands in same string by | char (pipe).
In this case the message starting char and the message closing char will be entered just one time, in the string beginning and at the end.
All the commands in string will not execute until the closing char will be entered.
Separate response will be sent for every command in the chain.

**Input string max length:**
64 characters.

**Backward support:**
Design note: transparent supporting for protocol 2000 will be implemented by switch protocol command from protocol 3000 to protocol 2000, in protocol 2000 there is already such a command to switch protocol to ASCII protocol (#56 : H38 H80 H83 H81).

</table>

Parameters Description:

- **IN** = Input number or ‘0’ to disconnect output.
- ‘>’ = Connection character between in and out parameters.
- **OUT** = Output number or ‘*’ for all outputs.

Examples:
Switch Video and Audio input 3 to output 7
#AV 3>7 CR
~AV 3>7 OK CRLF

Switch Video input 2 to output 4
#V 2>4 CR
~VID 2>4 OK CRLF

Switch Video input 4 to output 2 in machine number 6
#6@VID 4>2 CR
~6@VID 4>2 OK CRLF

Disconnect Video and Audio Output 4
#AV 0>4 CR
~AV 0>4 OK CRLF

Switch Video Input 3 to All Outputs
#V 3> CR
~VID 3>* OK CRLF

Chaining Multiple commands*
#AV 1>* | V 3>4, 2>2, 82>1, 0>2 | V 82>3 | A 0>1 | V? * CR
First switch all Audio and video outputs from input 1,
Then switch video input 3 to output 4, video input 2 to output 2, video input and disconnect video output 2.
Then switch audio input 3 to output 2,
Then disconnect audio output 1.
Then get status of all links (assume this is 4x4 matrix). Commands processing start after entering CR, response will sent for each command after processing it.

~AV 1>* OK CRLF
~VID 1>2, 3>4 OK CRLF
~VID 82>3 ERR### CRLF
~AUD 0>1 OK CRLF
~V 1>1, 0>2, 1>3, 3>4 CRLF

Signal Status commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>

<tbody>
<tr>
<td>Change signal status</td>
<td>SIGNAL INPUT, STATUS</td>
<td>SIGNAL INPUT, STATUS</td>
</tr>
<tr>
<td>Get signal status</td>
<td>SIGNAL? INPUT</td>
<td>SIGNAL INPUT, STATUS</td>
</tr>
</tbody>
</table>

Parameters Description:
- **INPUT** = Input number, "*" for all.
- **STATUS** = Signal state:
  - "0" or "off" for not existent signal.
  - "1" or "on" for existent signal.

Preset commands

<table>
<thead>
<tr>

</table>
### Kramer Protocol

#### Preset commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PRESET</strong></td>
<td>PRESET number.</td>
<td>~PRST-STR</td>
</tr>
<tr>
<td><strong>OUT</strong></td>
<td>Output in preset to show for, &quot;*&quot; for all.</td>
<td>~PRST-RCL</td>
</tr>
</tbody>
</table>

### Examples:

- Store current Audio & Video connections to preset 5
  
  #PRST-STR 5 CRLF

- Recall Audio & Video connections from preset 3
  
  #PRCL 3 CRLF

- Show source of video output 2 from preset 3
  
  #PRST-VID? 3,2 CRLF

#### Operation commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>LOCK</strong></td>
<td>MODE</td>
<td>LOCK-FP</td>
</tr>
<tr>
<td><strong>RESET</strong></td>

</table>

### Audio parameters commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AUD-LVL</strong></td>
<td>STAGE, CHANNEL, VOLUME</td>
<td>AUD-LVL</td>
</tr>
</tbody>
</table>

- **STAGE** = "In", "Out" or Numeric value (present audio processing stage). For example: "0" for Input level, "1" for Pre-Amplifier, "2" for Amplifier (Out) etc.

- **CHANNEL** = Input or Output #

- **VOLUME** = Audio parameter in Kramer units, precede minus sign for negative values.  
  
  -- increase current value,  
  
  -- decrease current value.
### Machine info commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>

</thead>
<tbody>
<tr>
<td>Read in/out count</td>
<td>INFO-IO?</td>
<td>INFO-IO: IN [INPUTS_COUNT], OUT [OUTPUTS_COUNT]</td>
</tr>
<tr>
<td>Read max presets count</td>
<td>INFO-PRST?</td>
<td>INFO-PRST: VID [PRESET_VIDEO_COUNT], AUD [PRESET_AUDIO_COUNT]</td>
</tr>
<tr>
<td>Reset configuration to factory default</td>
<td>FACTORY</td>
<td>FACTORY RESULT</td>
</tr>
</tbody>
</table>

* Time settings commands require admin authorization

### Identification commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol Handshaking</td>
<td>#CR</td>
<td>~OK CRLF</td>
</tr>
<tr>
<td>Read device model</td>
<td>MODEL?</td>
<td>MODEL [MACHINE_MODEL]</td>
</tr>
<tr>
<td>Read device serial number</td>
<td>SN?</td>
<td>SN [SERIAL_NUMBER]</td>
</tr>
<tr>
<td>Read device firmware version</td>
<td>VERSION?</td>
<td>VERSION [MAJOR] [MINOR] [BUILD] [REVISION]</td>
</tr>
<tr>
<td>Set machine name</td>
<td>NAME [MACHINE_NAME]</td>
<td>NAME [MACHINE_NAME] RESULT</td>
</tr>
<tr>
<td>Read machine name</td>
<td>NAME?</td>
<td>NAME [MACHINE_NAME]</td>
</tr>
<tr>
<td>Reset machine name to factory default*</td>
<td>NAME-RST</td>
<td>NAME-RST [MACHINE_FACTORY_NAME] RESULT</td>
</tr>
</tbody>
</table>

*Note: machine name not equal to model name. This name relevance for site viewer identification of specific machine or for network using (with DNS feature on).

[MACHINE_NAME] = Up to 14 Alpha-Numeric chars.

* Machine factory name = Model name + last 4 digits from serial number.

### Network settings commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read IP Address</td>
<td>NET-IP? NTIP?</td>
<td>NET-IP [IP_ADDRESS]</td>

<tbody>
<tr>
<td>Set gateway address</td>
<td>NET-GATE GATEWAY_ADDRESS NTGT</td>
<td>NET-GATE GATEWAY_ADDRESS RESULT</td>
</tr>
<tr>
<td>Read subnet mask</td>
<td>NET-GATE? NTGT?</td>
<td>NET-GATE GATEWAY_ADDRESS</td>
</tr>
<tr>
<td>Set DHCP mode</td>
<td>NET-DHCP DHCP_MODE NTDH</td>
<td>NET-DHCP DHCP_MODE RESULT</td>
</tr>
<tr>
<td>Read subnet mask</td>
<td>NET-DHCP? NTDH?</td>
<td>NET-DHCP DHCP_MODE</td>
</tr>
</tbody>
</table>

**DHCP_MODE**

- **0** – Don’t use DHCP (Use IP set by factory or IP set command).
- **1** – Try to use DHCP, if unavailable use IP as above.

<table>
<thead>
<tr>
<th>Change protocol ethernet port</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Read protocol ethernet port</td>
<td>ETH.PORT PROTOCOL, PORT ETHP?</td>
<td>ETH.PORT PROTOCOL, PORT ETHP</td>
</tr>
</tbody>
</table>

**PROTOCOL** = TCP / UDP (transport layer protocol)

**PORT** = ethernet port to enter protocol 3000 commands.

- **1-65535** = User defined port
- **0** - reset port to factory default (50000 for UDP, 5000 for TCP)

<table>
<thead>
<tr>
<th>Advanced switching commands</th>
<th>Syntax</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set audio follow video mode</td>
<td>AFV AFV-MODE</td>
<td>AFV AFV-MODE RESULT</td>
</tr>
</tbody>
</table>

**AFV-MODE** = Front panel AFV mode

- “0” or “afv” to set front panel switching buttons in audio-follow-video state.
- “1” or “brk” to set front panel switching buttons in their previous state when audio.

---

**Note:**

This command affects device front-panel mode and AUD VID command.
14.3 Kramer Protocol 2000

This RS-232/RS-485 communication protocol uses four bytes of information as defined below. The default data rate is 9600 baud, with no parity, 8 data bits and 1 stop bit.

Table 16: Protocol Definitions

<table>
<thead>

</tbody>
</table>

4th byte

1st BYTE: Bit 7 – Defined as 0.
D – “DESTINATION”: 0 - for sending information to the switchers (from the PC);
1 - for sending to the PC (from the switcher).
N5…N0 – “INSTRUCTION”
The function that is to be performed by the switcher(s) is defined by the INSTRUCTION (6 bits). Similarly, if a function is performed via the machine’s keyboard, then these bits are set with the INSTRUCTION NO., which was performed. The instruction codes are defined according to the table below (INSTRUCTION NO. is the value to be set for N5…N0).

2nd BYTE: Bit 7 – Defined as 1.
I6…10 – “INPUT”.
When switching (ie. instruction codes 1 and 2), the INPUT (7 bits) is set as the input number which is to be switched. Similarly, if switching is done via the machine’s front-panel, then these bits are set with the INPUT NUMBER which was switched. For other operations, these bits are defined according to the table.

3rd BYTE: Bit 7 – Defined as 1.
O6…00 – “OUTPUT”.
When switching (ie. instruction codes 1 and 2), the OUTPUT (7 bits) is set as the output number which is to be switched. Similarly, if switching is done via the machine’s front-panel, then these bits are set with the OUTPUT NUMBER which was switched. For other operations, these bits are defined according to the table.

4th BYTE: Bit 7 – Defined as 1.
Bit 5 – Don’t care.
OVR – Machine number override.
M4…M0 – MACHINE NUMBER.
Kramer Protocol

Used to address machines in a system via their **machine numbers**. When several machines are controlled from a single serial port, they are usually configured together with each machine having an individual machine number. If the OVR bit is set, then all machine numbers will accept (implement) the command, and the addressed machine will reply.

For a single machine controlled via the serial port, always set M4…M0 = 1, and make sure that the machine itself is configured as MACHINE NUMBER = 1.

**Table 17: Instruction Codes for Protocol 2000**

Note: All values in the table are decimal, unless otherwise stated.

<td>DEFINE MACHINE</td>
<td>1 - number of inputs 2 - number of outputs 3 - number of setups</td>
<td>1 - for video 2 - for audio</td>
</tr>
</tbody>
</table>

**NOTES on the above table:**

**NOTE 1** - When the master switcher is reset, (e.g. when it is turned on), the reset code is sent to the PC. If this code is sent to the switchers, it will reset according to the present power-down settings.

**NOTE 2** - These are bi-directional definitions. That is, if the switcher receives the code, it will perform the instruction; and if the instruction is performed (due to a keystroke operation on the front panel), then these codes are sent. For example, if the HEX code 01 85 88 83 was sent from the PC, then the switcher (machine 3) will switch input 5 to output 8. If the user switched input 1 to output 7 via the front panel keypad, then the switcher will send HEX codes: 41 81 87 83 to the PC.

When the PC sends one of the commands in this group to the switcher, then, if the instruction is valid, the switcher replies by sending to the PC the same four bytes that it was sent (except for the first byte, where the DESTINATION bit is set high).

**NOTE 3** - SETUP # 0 is the present setting. SETUP # 1 and higher are the settings saved in the switcher's memory, (i.e. those used for Store and Recall).

**NOTE 4** - The reply to a “REQUEST” instruction is as follows: the same instruction and INPUT codes as were sent are returned, and the OUTPUT is assigned the value of the requested parameter. The replies to instructions 10 and 11 are as per the definitions in instructions 7 and 8 respectively. For example, if the present status of machine number 5 is breakaway setting, then the reply to the HEX code 0B 80 80 85 would be HEX codes 4B 80 81 85.

**NOTE 6** – If INPUT is set to 127 for these instructions, then, if the function is defined on this machine, it replies with OUTPUT=1. If the function is not defined, then the machine replies with OUTPUT=0, or with an error (invalid instruction code).

If the INPUT is set to 126 for these instructions, then, if possible, the machine will return the current setting of this function, even for the case that the function is not defined. For example, for a video switcher which always switches during the VIS of input #1, (and its VIS setting cannot be programmed otherwise), the reply to the HEX code 0A FE 80 81 (ie. request VIS setting, with INPUT set as 126dec) would be HEX codes 4A FE 81 81 (ie. VIS setting = 1, which is defined as VIS from input #1).

**NOTE 8** - The reply is as in TYPE 3 above, except that here the OUTPUT is assigned with the value 0 if the setup is not defined / no valid input is detected; or 1 if it is defined / valid input is detected.

**NOTE 9** - An error code is returned to the PC if an invalid instruction code was sent to the switcher, or if a parameter associated with the instruction is out of range (e.g. trying to save to a setup greater than the highest one, or trying to switch an
input or output greater than the highest one defined). This code is also returned to the PC if an RS-232 instruction is sent while the machine is being programmed via the front panel. Reception of this code by the switcher is not valid.

NOTE 10 – This code is reserved for internal use.

NOTE 13 - This is a request to identify the switcher/s in the system. If the OUTPUT is set as 0, and the INPUT is set as 1, 2, 5 or 7, the machine will send its name. The reply is the decimal value of the INPUT and OUTPUT. For example, for a 2216, the reply to the request to send the audio machine name would be (HEX codes):

7D 96 90 81 (i.e. 128dec+ 22dec for 2nd byte, and 128dec+ 16dec for 3rd byte).

If the request for identification is sent with the INPUT set as 3 or 4, the appropriate machine will send its software version number. Again, the reply would be the decimal value of the INPUT and OUTPUT - the INPUT representing the number in front of the decimal point, and the OUTPUT representing the number after it. For example, for version 3.5, the reply to the request to send the version number would be (HEX codes):

7D 83 85 81 (i.e. 128dec+ 3dec for 2nd byte, 128dec+ 5dec for 3rd byte).

If the OUTPUT is set as 1, then the ASCII coding of the lettering following the machine’s name is sent. For example, for the VS-7588YC, the reply to the request to send the first suffix would be (HEX codes):

7D D9 C3 81 (i.e. 128dec+ ASCII for “Y”; 128dec+ ASCII for “C”).

NOTE 14 - The number of inputs and outputs refers to the specific machine which is being addressed, not to the system. For example, if six 16X16 matrices are configured to make a 48X32 system (48 inputs, 32 outputs), the reply to the HEX code

3E 82 81 82 (i.e. request the number of outputs)

would be HEX codes

7E 82 90 82

ie. 16 outputs

NOTE 16 - The reply to the “REQUEST WHETHER PANEL IS LOCKED” is as in NOTE 4 above, except that here the OUTPUT is assigned with the value 0 if the panel is unlocked, or 1 if it is locked.

NOTE 19 – After this instruction is sent, the unit will respond to the ASCII command set defined by the OUTPUT byte. The ASCII command to operate with the HEX command set must be sent in order to return to working with HEX codes.

NOTE 24 – Further information needed in instructions 22 and 25, is sent using instruction 42 – which is sent prior to the instruction. For example, to request the audio gain value of output # 9, send hex codes

2A 81 80 81

and then send HEX codes

19 89 81 81.

To set input gain change mode, send hex codes

2A 80 80 81

and then send HEX codes

16.

NOTE 25 – For units which detect the validity of the video inputs, Instruction 16 will be sent whenever the unit detects a change in the state of an input (in real-time).

For example, if input 3 is detected as invalid, the unit will send the HEX codes

10 83 84 81

If input 7 is detected as valid, then the unit will send HEX codes

10 87 85 81.
LIMITED WARRANTY
The warranty obligations of Kramer Electronics for this product are limited to the terms set forth below:

What is Covered
This limited warranty covers defects in materials and workmanship in this product.

What is Not Covered
This limited warranty does not cover any damage, deterioration or malfunction resulting from any alteration, modification, improper or unreasonable use or maintenance, misuse, abuse, accident, neglect, exposure to excess moisture, fire, improper packing and shipping (such claims must be presented to the carrier), lightning, power surges, or other acts of nature. This limited warranty does not cover any damage, deterioration or malfunction resulting from the installation or removal of this product from any installation, any unauthorized tampering with this product, any repairs attempted by anyone unauthorized by Kramer Electronics to make such repairs, or any other cause which does not relate directly to a defect in materials and/or workmanship of this product. This limited warranty does not cover cartons, equipment enclosures, cables or accessories used in conjunction with this product.

Without limiting any other exclusion herein, Kramer Electronics does not warrant that the product covered hereby, including, without limitation, the technology and/or integrated circuit(s) included in the product, will not become obsolete or that such items are or will remain compatible with any other product or technology with which the product may be used.

How Long Does This Coverage Last
Seven years as of this printing, please check our Web site for the most current and accurate warranty information.

Who is Covered
Only the original purchaser of this product is covered under this limited warranty. This limited warranty is not transferable to subsequent purchasers or owners of this product.

What Kramer Electronics will do
Kramer Electronics will, at its sole option, provide one of the following three remedies to whatever extent it shall deem necessary to satisfy a proper claim under this limited warranty:
1. Elect to repair or facilitate the repair of any defective parts within a reasonable period of time, free of any charge for the necessary parts and labor to complete the repair and restore this product to its proper operating condition. Kramer Electronics will also pay the shipping costs necessary to return this product once the repair is complete.
2. Replace this product with a direct replacement or with a similar product deemed by Kramer Electronics to perform substantially the same function as the original product.
3. Issue a refund of the original purchase price less depreciation to be determined based on the age of the product at the time remdy is sought under this limited warranty.

What Kramer Electronics will not do Under This Limited Warranty
If this product is returned to Kramer Electronics or the authorized dealer from which it was purchased or any other party authorized to repair Kramer Electronics products, this product must be insured during shipment, with the insurance and shipping charges prepaid by you. If this product is returned uninsured, you assume all risks of loss or damage during shipment. Kramer Electronics will not be responsible for any costs related to the removal or re-installation of this product from or into any installation. Kramer Electronics will not be responsible for any other repairs, any setup up this product, any adjustment of user controls or any programming required for a specific installation of this product.

How to Obtain a Remedy under this Limited Warranty
To obtain a remedy under this limited warranty, you must contact either the authorized Kramer Electronics reseller from whom you purchased this product or the Kramer Electronics office nearest you. For a list of authorized Kramer Electronics resellers and/or Kramer Electronics authorized service providers, please visit our web site at www.kramerelectronics.com or contact the Kramer Electronics office nearest you.

In order to pursue any remedy under this limited warranty, you must possess an original, dated receipt as proof of purchase from an authorized Kramer Electronics reseller. If this product is returned under this limited warranty, a return authorization number, obtained from Kramer Electronics, will be required. You may also be directed to an authorized reseller or a person authorized by Kramer Electronics to repair the product.

If it is decided that this product should be returned directly to Kramer Electronics, this product should be properly packed, preferably in the original carton, for shipping. Cartons not bearing a return authorization number will be refused.

Limitation on Liability
THE MAXIMUM LIABILITY OF KRAMER ELECTRONICS UNDER THIS LIMITED WARRANTY SHALL NOT EXCEED THE ACTUAL PURCHASE PRICE PAID FOR THE PRODUCT. TO THE MAXIMUM EXTENT PERMITTED BY LAW, KRAMER ELECTRONICS IS NOT RESPONSIBLE FOR DIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES RESULTING FROM ANY BREACH OF WARRANTY OR CONDITION, OR UNDER ANY OTHER LEGAL THEORY. Some countries, districts or states do not allow the exclusion or limitation of liability, special, incidental, consequential or indirect damages, or the limitation of liability to specified amounts, so the above limitations or exclusions may not apply to you.

Exculsive Remedy
TO THE MAXIMUM EXTENT PERMITTED BY LAW, THIS LIMITED WARRANTY AND THE REMEDIES SET FORTH ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, REMEDIES AND CONDITIONS, WHETHER ORAL OR WRITTEN, EXPRESS OR IMPLIED. TO THE MAXIMUM EXTENT PERMITTED BY LAW, KRAMER ELECTRONICS SPECIFICALLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IF KRAMER ELECTRONICS CANNOT LAWFULLY DISCLAIM OR EXCLUDE IMPLIED WARRANTIES UNDER APPLICABLE LAW, THEN ALL IMPLIED WARRANTIES COVERING THIS PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL APPEAR TO THIS PRODUCT AS PROVIDED UNDER APPLICABLE LAW.

IF ANY PRODUCT TO WHICH THIS LIMITED WARRANTY APPLIES IS A "CONSUMER PRODUCT" UNDER THE MAGNUSON-MOSS WARRANTY ACT (15 U.S.C. §2301 ET SEQ.) OR OTHER APPLICABLE LAW, THE FOREGOING DISCLAIMER OF IMPLIED WARRANTIES SHALL NOT APPLY TO YOU, AND ALL IMPLIED WARRANTIES ON THIS PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR THE PARTICULAR PURPOSE, SHALL APPLY AS PROVIDED UNDER APPLICABLE LAW.

Other Conditions
This limited warranty gives you specific legal rights, and you may have other rights which vary from country to country or state to state.

This limited warranty is void if (i) the label bearing the serial number of this product has been removed or defaced, or (ii) the product is not distributed by Kramer Electronics or (iii) this product is not purchased from an authorized Kramer Electronics reseller. If you are unsure whether a product is authorized, please visit our web site at www.kramerelectronics.com or contact a Kramer Electronics office from the list at the end of this document.

Your rights under this limited warranty are not diminished if you do not complete and return the product registration form or complete and submit the online product registration form. Kramer Electronics thanks you for purchasing a Kramer Electronics product. We hope it will give you years of satisfaction.
For the latest information on our products and a list of Kramer distributors, visit our Web site: www.kramerAV.com, where updates to this user manual may be found. We welcome your questions, comments and feedback.

Safety Warning:
Disconnect the unit from the power supply before opening/servicing.
